

OUR GROUP

IMEL was founded in 1964 as a company specialized in the design and fabrication of industrial finishing plants for the treatment and coating of any material, in diverse fields, from plastics to metals, household appliances to auto parts and furnishings. Situated in one of Italy's most important industrial areas, IMEL has collaborated with leading companies, gained considerable experience, and has constructed hundreds of plants worldwide.

Today IMEL is in the vanguard of technology, quality and service.

IMEL is committed to its customers and to finding the most appropriate solutions, not only in terms of productivity and the budget, but also for increasingly important factors such as administrative flexibility, energy consumption, environmental issues, and the ergonomics and aesthetic of a plant.

UNPARALLELED EXPERIENCE
IN INDUSTRIAL FINISHING PLANTS

VIAX Consorzio Export

>> MISSION

OUR VISION

IMEL wants to be the ideal partner of its customers solving their production problems keeping at the same time a clean world for our children. Therefore we look for harmony between manpower and production and between workshop and environment.

OUR MISSION

IMEL is in the vanguard of technology, quality and service. IMEL is committed to its customers and to finding the most appropriate solutions, not only in terms of productivity and the budget, but also for increasingly important factors such as administrative flexibility, energy consumption, environmental issues, and the ergonomics and aesthetic of a plant.

OUR VALUES

Passion ,Dynamism and flexibility, Seriousness and honesty, Sobriety behavior, Respect for others and the environment, Continuous training, Sharing.

OUR CLIENTS DESERVE THE BEST TREATMENT IN THE WORLD

Since entering the field in 1964, IMEL has through major contracts established itself as a leader in industrial finishing. Our success is in part due to our ability to find solutions to the most diverse and challenging requirements of our customers. IMEL customers are assured of a genuine specialist in the field, and can count on our knowledgeable, dynamic team, and on our advanced technology. IMEL's research and development offers unique solutions for customers with special requirements, and at the same time our international dimension allows IMEL to provide the design, fabrication and maintenance of plants of any size, anywhere in the world.

PRE-TREATMENT:

IMEL has a long experience in surface treating plants, either by immersion or by spraying, as well as very good trade references and demanding customers who require the highest quality standards. IMEL has the know-how and technology to conceive plants for all kinds of surface treating, including those which are not necessarily involved with painting, such as degreasing, phosphating, pickling, conversion, nanotechnologies and other chemical treatments.

PAINTING WITH LIQUID OR POWDER PRODUCTS:

The application of painting products implies technical problems which IMEL has resolved hundreds of times, thus creating a solid know-how which is always put at the disposal of the customer. Having constructed many plants meeting the highest quality standards, IMEL knows all the technical problems related to this painting method and has a long experience in the techniques that reduce the problem of over spray and obtain the maximum quality product

ELECTROCOATING:

IMEL has constructed electrocoating plants since the 1960's and has very good trade references as well as demanding customers who require the highest quality standards. The electrocoating installations constructed by IMEL can paint a wide range of products, such as: washing machines, dishwashers , tractor cabs, windscreen wipers and other car components, batteries, vented batteries in Cu-Al, domestic radiators, medical equipment and so forth.

PORCELAIN ENAMEL:

IMEL constructs plants for all kinds of enamelling: liquid or electrostatic powder painting, direct white, special "combined" systems and chemical ground, "two coats one fire" cycles. The installations for enamel painting can treat a wide range of products, such as: pots, baths, ovens and kitchen work tops, boilers, radiators, sheathings for building and so forth.

SPECIAL PLANTS:

These are the result of research and experimentation by IMEL and are used in different sectors. They include: Painting of metal sheets and profiles; Painting of small items in large quantities; Painting of big sheet-metal drums; Automatic machines for pot enamelling; Drying plants; Pyrolytic stripping ovens; Plants with fluidised bed for thermoplastic coating.
