

ITALTECNO IS A COMPANY SPECIALIZED IN THE RESEARCH OF ALUMINIUM SURFACE TREATMENTS

Maximum co-operation and assistance are offered by the ENGINEERING DIVISION (equipment, plants, turn-key projects) and the CHEMICAL DIVISION (R&D, production, marketing) who work in close contact with the customers.

ITALTECNO's distinctive feature can be defined as follows:

- Technical assistance,
- Training of personnel,
- Up-dating on the state-of-the-art technologies,
- Electrochemical and chemical research,
- A continuous flow of information through Interall, the publishing house of the group

ITALTECNO offers:

- Planning and supply of turn-key plants and equipment for:
 - Anodizing plants for extrusion (vertical & horizontal)
 - Anodizing plants for small parts (conventional & hard anodizing)
 - Painting and powder coating plants (vertical, horizontal, compact)
 - Integrated aluminium extrusion finishing & fabrication
- Galvanic plants
- Chemical products and know-how
- Special technologies

Other services :

- Restructuring and modernizing of existing plants
- Production start-up

OUR ACTIVITIES

CHEMICAL DIVISION Chemical products and innovative technologies

The R&D and chemical divisions of Italtelco have always been strategic for the worldwide fame of the company.

The quality of the researchers, the many international patents and the long time experience in aluminium finishing have launched Italtelco as leader in technologies for interior and architectural aluminium sectors, decorative, automotive and aircraft industry (in 1983 Italtelco sold a license to Lockheed for special sealing technologies).

ENGINEERING DIVISION Anodizing and Powder Coating Plants

The engineering division of Italtelco has manufactured and sold more than 100 turnkey anodizing and powder coating plants all over the world and its reference list includes leading customers like Alcoa.

The activity of the Division included also manufacturing of state of the art equipment and accessories for use in aluminium finishing companies which are always sold with proper training of final users.

Training and know-how teaching are the competitive advantage of Italtelco as supplier of equipment and plant.

TECHNICAL ASSISTANCE AND CUSTOMER SERVICE

Italtelco's Staff, constituted of internationally renowned Technicians and Researchers, is a land mark for those who operate in the aluminium surface treatment field.

Its main characteristics is the constant and continuous relationship with customers and collaborators to whom it supplies technical assistance, personnel training and periodical updating on the most modern technologies and researches carried out in the chemical and electrochemical field in Italtelco's laboratories.

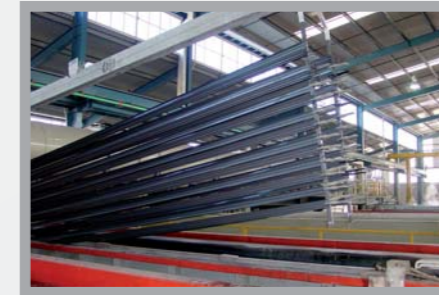

MISSION

Italtelco was established in 1974 as an enterprise specialized in researching and developing surface treatment technologies for aluminium and its alloys.

During the first years of the '80's, Italtelco widened its market for chemical products, machines and systems beyond Europe and in many different sectors (aluminium for use in architecture and in the car and aeronautical industries as well as for decorative, mechanical and other industrial purposes) and in 1983, sold an important license to Lockheed for special anodizing technologies, thus making its debut on the American market.

After this, Italtelco opened branches in Brazil, India, the Far East and Germany plus agency, distribution and technical service offices in 25 different countries throughout the world. With internationally recognized experts and researchers, Italtelco is now a reference point for all operators in the sector.

The Engineering, plant manufacturing and Chemistry divisions located in North Italy work in close contact with the customers, helping to create customized technological solutions and providing after-sales technical assistance wherever an Italtelco customer may reside in the world.

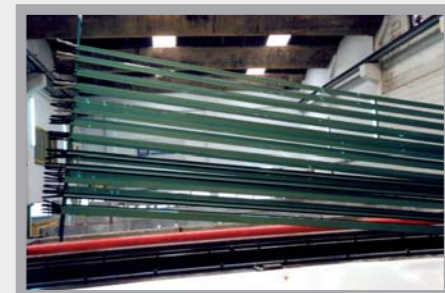

Blue multicolour electrocoat

Bridge crane with complete suction hood for brightening line

Copenhagen airport gray multicolour

Green multicolour electrocoat

Freeal, sulphuric acid recovery plant for anodizing solutions

Fumes scrubbing plant (Alcoa)

Die cleaning plants with related caustic soda recovery

Modern automatic horizontal plant
