

➤ Activities - Technologies - Services

This division manufactures specialised cleaning equipment for the mechanical industry and for the industrial cleaning of technical parts in full compliance with growing requirements in the environmental field.

Union is currently capable of producing a wide range of modern hermetically sealed eco-compatible hi-tech solvent cleaning systems, which are reliable and economic, capable of meeting all cleaning requirements.

The wide range of systems currently produced by Union, either multi-drum or single-drum for larger pieces, are able to resolve all surface cleaning problems, using either chlorinated solvents or other alternatives such as hydrocarbon solvents.

The high quality of the materials used in manufacture (all the main components are made of stainless steel), the outstanding reliability of the applied electronics, the facility of system operation supplied on the machine all guarantee maximum and lasting reliability.

Cycles can be either pre-set or programmed by the operator meaning a choice of: hot cleaning baths, cold baths, with or without immersion, with solvent vapours only, with or without the use of ultrasound, capable of strengthening the mechanical action.

The drying phase with the forced re-circulation of air in a closed circuit or under vacuum depending on the various models, means that the items are dried perfectly with low emissions into the atmosphere, even lower than the limits imposed by the strictest international standards.

All Union produced systems represent the latest developments in the industrial cleaning field, thanks to their full compliance with the most recent environmental standards.

HERMETICALLY SEALED METAL DEGREASING SYSTEMS USING CHLORINATED SOLVENTS, HYDROCARBON SOLVENT AND MODIFIED ALCOHOL BASED SOLVENTS

ENVIRONMENTALLY FRIENDLY CLEANING PROCESSES: WASHING CABIN, HIDROKINETIC WATER BASE CLEANING SYSTEM, WASHING TUNNEL CONTINUOUS OR STEP BY STEP

VIAX Consorzio Export

MISSION

Environmentally friendly cleaning processes: washing cabin, Hidrokinetic water base cleaning system, washing tunnel continuous or step by step.

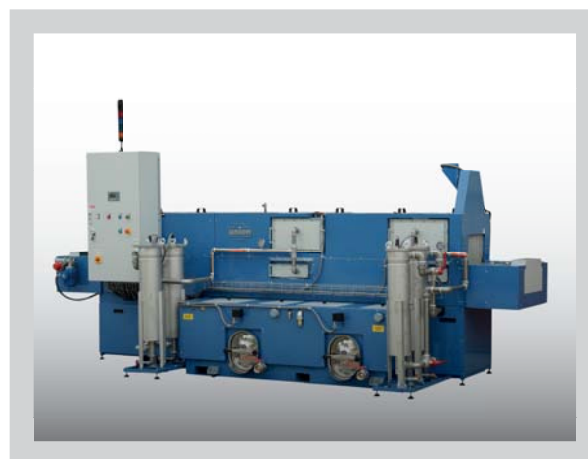

Hermetically sealed metal degreasing systems using chlorinated solvents, hydrocarbon solvent and modified alcohol based solvents, compatible with the environment and the requirements of modern companies.

Hydrokinetic vacuum cleaning machine

Degreasing cabin front loading spray cleaning machine

Degreasing tunnel Continuous or step by step cleaning systems

MUMV 50

Metal degreasing systems using Dowclene 1601 solvent under vacuum Basket size 450 x 600 x 450 mm h

MDMV 2

Metal degreasing systems using chlorinated solvents under vacuum Automatic loading system

MUMV 100

Metal degreasing systems using Dowclene 1601 solvent under vacuum Automatic loading system
